**Theorem 0.1** (cf. Kra et al. (2022), Theorem 2.10). *Let  $\Gamma$  be an amenable group,  $A \subset \Gamma$ , and  $\Phi$  be a Følner sequence in  $\Gamma$  such that the limit*

$$\delta = \lim_{N \rightarrow \infty} \frac{|\cdot|A \cap \Phi_N}{|\cdot|\Phi_N}$$

*exists.*

*Then there exists an ergodic system  $(X, \mu, \Gamma)$  that is acted on by  $\Gamma$ , a clopen set  $E \subset X$ , a Følner sequence  $\Psi$  in  $\Gamma$ , and a point  $a \in X$  that is generic with  $\mu$  with respect to  $\Psi$  such that  $\mu(E) \geq \delta$  and*

$$A = \gamma \in \Gamma : \gamma.a \in E.$$
